CONSCIOUS CONSULTANCY

5OES (IMS) deliver marine biodiversity consultancy services across the globe. We pragmatically advise on development and have a long history of project approval. With many years of experience in delivering sea turtle and marine mammal research, we also demonstrate our environmental and social commitment by independently funding local community-led conservation programmes in Africa. We actively collaborate within species specific scientific communities, and as a result, we are trusted and well connected. At times, our clients require specialist knowledge and geographic experience, and as such, we provide complementary support to external environmental teams, engineers and contractors. Developers also often directly engage with us. We understand the increasing importance for our clients to meet their sustainability objectives and we work closely with them within our areas of expertise to promote and implement strategies through CSR, project delivery and operational management. Finally, we like to create industry innovations, build capacity and make the delivery of our advice simpler. As such, we develop products and tools, and where possible, distribute industry innovations for free in line with our general outlook.

Funding of a village drinking water supply project in Liberia to support a local sea turtle conservation programme

2014

“Collaborating with 5Oceans on their ESIA studies in West Africa has been a very positive experience for Ocean Ecology Network and its local project partners. 5Oceans is a company with a conscience. Neil Cousins’ sense of responsibility towards the people and projects he works with, his straightforward and professional approach, along with 5Oceans’ efforts to support local community projects that enhance marine conservation, all make working with them a very rewarding experience.”

Manjula Tiwari Ph.D.
President, Ocean Ecology Network, Inc., USA

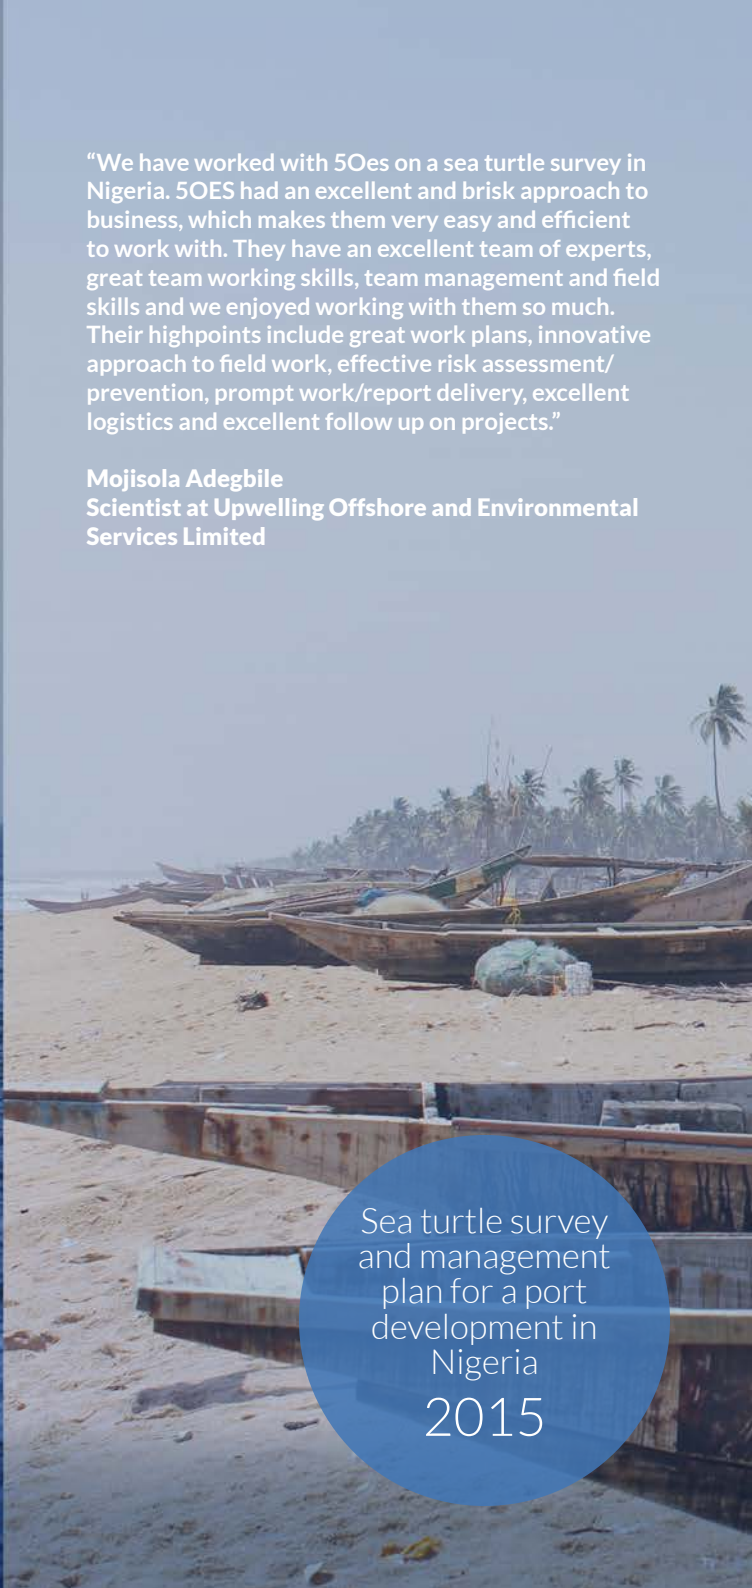

Humpback whale and sea turtle surveys for a port development in Gabon

2013

“5Oceans supported URS on a major ESIA, undertaking marine mammal and sea turtle surveys and providing input to mitigation and management plans for a major infrastructure port project in Gabon. 5Oceans were highly professional at all times, worked efficiently and self-sufficiently in the field, and produced very high quality reporting. They also went the extra mile in a number of areas, providing ad hoc advice and input to the wider project as needed. I would definitely engage with them again on projects in the UK or overseas.”

Kerry Whalley CEnv MCIWEM
Associate Environment Specialist.
URS Infrastructure & Environment UK Limited

“We have worked with 5Oes on a sea turtle survey in Nigeria. 5OES had an excellent and brisk approach to business, which makes them very easy and efficient to work with. They have an excellent team of experts, great team working skills, team management and field skills and we enjoyed working with them so much. Their highpoints include great work plans, innovative approach to field work, effective risk assessment/prevention, prompt work/report delivery, excellent logistics and excellent follow up on projects.”

Scientist at Upwelling Offshore and Environmental Services Limited

Sea turtle survey and management plan for a port development in Nigeria

2015

WHERE WE WORK

“5Oes were commissioned to provide marine ecology support to our EIA, specifically assessing impacts to marine mammals and local turtle populations. As PM for the larger project it was my first experience working with 5Oes and I have since approached them to collaborate on other potential projects. The 5Oes team were very professional and efficient in conducting their surveys, and provided a report which was not only excellent, but useable and informative. It was refreshing to have their skills and knowledge at my disposal, trusting in them as the experts to deliver on what is required. They were “low maintenance” to work with and I was delighted to see that 5Oes had used the project to contribute to constructing a water pump at their own expense for a local community as they continue to develop these relationships with locals.”
